Is God a Mathematician?

Dr. Mario Livio, Ph. D
Head of Office of Public Outreach
Space Telescope Science Institute
Baltimore, MD

For centuries, mathematical theories have proven uncannily accurate at describing - and even predicting - the physical world. What is it that gives mathematics such powers?

In "Is God A Mathematician?" this question will be thoroughly reviewed. The talk will span such fields as mathematics, cosmology, physics, and the cognitive sciences, and will attempt to offer an accessible and lively account of the lives and thoughts of some of the greatest mathematicians and scientists in history, from Archimedes to Galileo and Descartes, and from Newton to Hilbert and Gödel, on up to the present day.

Along the way I will discuss another question with which mathematicians, philosophers, and neuroscientists have struggled for centuries: Is mathematics ultimately invented or discovered?

4 pm, Thursday., March 18, 2010
