

Imaging Engineer - Motorola Mobility (A Google company)

Basic Qualifications - Years of Experience: 0

Scope of Responsibility/Expectation:

The candidate would support component validation, system validation and system debug while learning about the camera system with the goal of taking on additional responsibility in imager development.

Specific Knowledge/Skills:

Emphasis on understanding HW and SW. The candidate must be able to work with standard debug tools like oscilloscope, have strong test and debug skills, a general understanding of the imaging system, be self driven, and learn quickly both with support from coworkers and with self directed activities. Familiarity with the android SW architecture is a plus.
