SENIOR TECHNICAL PROGRAM MANAGER OF NEW CAMERA TECHNOLOGY - NVIDIA

In this highly visible position, you will leverage your technical and managerial expertise to ensure successful introduction of products at NVIDIA.

RESPONSIBILITIES:

- Drive new camera technologies from concept to production across multiple teams, influencing senior decision makers to:
- Develop program schedules, milestones, deliverables, and end to end plan for technology release.
- Negotiate resources to ensure plan execution stays on track
- Support go to market and deployment by proper software planning
- Identify and ensure the development of collateral for customer consumption and training
- Coordinate and plan camera technology development for market deployment by:
- Working and coordinating between Architecture, Software, Computer Vision, Platform, Software Configuration Management (SQM), and Quality Assurance (QA) teams
- Aligning planning between engineering, marketing, deployment and support teams
- Working with QA to ensure product deployment is supported by quality assurance plans and clear acceptance criteria that are executed and tracked throughout project lifecycle.
- Ensuring programs stay on schedule and within scope; immediately communicating any changes and realigning all stakeholders
- Regularly communicating the program status and key issues to internal customers and senior management
- Correctly representing the urgency of issues and escalating issues appropriately.
- Providing hands-on technical leadership to find solutions to problems and drive open issues to closure
- Develop and refine cross-functional processes to ensure flawless execution and operational excellence with cycle over cycle improvement

MINIMUM REQUIREMENTS:

- 5+ years of experience in technical program management
- Matrix management experience with a track-record of driving successful products to market and into volume production
- Project management experience including scheduling, resource allocation, risk assessment, and process development
- Strong technical background; 10+ years’ experience with imaging (image sensors, optics, image processing pipelines, etc.)
• Detail oriented with proven ability to multitask in a fast-paced environment with shifting priorities and changing requirements
• Excellent communication and technical presentation skills
• Strong drive for success, creative problem solving and negotiating solutions to unanticipated problems.
• Experience with mobile platforms a plus
• BSEE or equivalent required. Advance degree preferred
